

1. You need the full version of Adobe Acrobat 6 to convert PS files to PDF via Distiller.
2. In Distiller 6 bring up the Press Quality settings which you will then need to edit to match those shown here and then save with a name. eg. Press Quality_Imago_061204.
3. With the Press Quality settings showing up as your Default Setting, go into Settings in the top tool bar. Settings > Edit Adobe PDF settings.
4. Click on each tab and edit settings to match these.
5. Ignore the PDF/X tab. Until there is some consensus as to which colour profile the book industry is using, it is best to ignore this tab.
6. Save and name your settings.
7. Then bring up this new setting as your default setting.
8. With this default chosen, drag & drop your PS files over Distiller.
